

A. Planning the development of municipal facilities

1. For the Government-planned economy as a whole and for selected regions, what is the relationship of expenditures for housing to expenditures for all other municipal facilities (utilities, streets, schools, hospitals, stores, etc.)

- a. In 1951-55
- b. In 1956-60
- c. In later years

2. What are the expenditures, actual in 1951-55 and planned for 1956-60, on:

- a. Government-built housing
- b. Other Government-built municipal facilities
  - 1) utilities
  - 2) streets
  - 3) schools
  - 4) hospitals
  - 5) stores
  - 6) all others

Specify whether in prices of July 1950 or July 1955.

3. Besides the Government-planned and built facilities, what municipal facilities will be built in 1956-60? Is non-Government building limited to housing?

4. What is the estimated expenditure on these non-Government facilities?

5. Will there be a change over the years 1956-60, in the relationship between new Government and non-Government municipal facilities? Specify the relationship, in physical and monetary terms, of Government to non-Government housing construction.

B. Implementation of plans for the development of new municipal facilities

1. Under the new economic system, what will be the national, republic and local organizations responsible for:

- a. drawing up yearly plans
- b. controlling the allocation of construction resources
- c. carrying out the construction
- d. accepting and distributing or operating the new facilities

2. Describe the functions of each of these organizations, giving full details on the authority of each. Illustrate by showing what would happen if construction funds were substantially increased or decreased.

3. Provide a detailed diagram showing the interrelationships of these organizations.

4. What will be the mechanism for setting the priorities for housing and municipal construction on the one hand, and industrial construction? How will questions of regional priorities be decided?

5. By what mechanism is the planned relationship of housing construction to other municipal construction maintained? Demonstrate the measures that would be taken at the national and other levels if the pace of housing construction were to exceed the pace of municipal construction to an excessive degree.
